

User Guide

Note – The app does not work on the simulator due to apple latest M1 chip, please run the app on your device.

Just connect your iPhone with the MacBook, Xcode will automatically detect your phone. Once detected, go to the run destination menu next to the scheme menu in the toolbar and select your phone, please refer to the below link if you still face the problem.

[Click here!](#)

The app is pretty straightforward, it only has two screens:

1. Splash screen
2. HomeScreen

Once on the Home screen, the user can click on the “camera” icon on the top right side of the app i.e, on the navigation item bar button.

The app opens the camera and the user is supposed to take picture of a railroad boxcar, once taken user has the option to crop the photo and use it.

The app then tells the condition of the railroad boxcar by changing the title on the top.
